

Lightfire Partner Performance Review

Appointments set 6 July – 15 August 2026 whose date has passed · issued 18 August

65.8% Your sit % against our 80% goal	78.9% Reece setters, same measure	38% Your appointments with no confirmer of record	0 Sales from 244 appts with no confirmer, either team	12 → 4 Your agents on our dialler, in one week
---	---	---	---	--

The whole review in one paragraph

Sit % — sits divided by issued appointments net of cancellations — is the number our floor is managed to, and our standard is **80%**. Your book runs **65.8%**, ours 78.9%; neither of us is where we want to be. The cause is not qualification and not the leads you work: **38% of Lightfire-set appointments have no confirmer of record, against 11% of ours**, and once confirmation status is held constant we find no statistically distinguishable difference between the two teams. **A substantial share of that fix is ours** — our desk covers 22% of your book and 87% of our own. We are asking for a shared confirmation-ownership rule, your bench restaffed, and sit % reported weekly by agent.

Credit first, because it is earned

- **Craig Deer sets more appointments than any setter in our company** — 152 in six weeks, 49 in the week of 9 August alone.
- **Carla Wright doubled her output** (13 → 26), and your three staffed agents raised combined output 31% while covering an absent bench.
- **Your confirmed appointments hold up** — they issue at 85.1% against our 92.9%.

1. Issued Sit % by agent against the 80% goal

Issued Sit % = sits ÷ (gross issued – cancels). Section 3 uses **Matured Sit %** (sits ÷ all matured appointments), necessarily lower. The two are not comparable.

Agent	Gross issued	Cancels	Net issued	Sits	Issued Sit %	vs goal	Sits short
Gordon, Grecian *	7	1	6	6	100.0%	+20.0	—
Dennis, Jodian *	7	0	7	6	85.7%	+5.7	—
Martin, Nickalos *	7	1	6	5	83.3%	+3.3	—
Slowely, Diamoneke *	17	0	17	14	82.4%	+2.4	—
Bryce, Shaday *	8	0	8	6	75.0%	−5.0	0.4
Wright, Carla	30	0	30	20	66.7%	−13.3	4.0
Walker, Shari	34	0	34	22	64.7%	−15.3	5.2
Deer, Craig	99	2	97	60	61.9%	−18.1	17.6
Evans, Tresharna *	13	0	13	8	61.5%	−18.5	2.4
Campbell, Brittany *	5	0	5	3	60.0%	−20.0	1.0
Francis, Yanique *	11	0	11	4	36.4%	−43.6	4.8
Lightfire total	238	4	234	154	65.8%	−14.2	33
Reece setters, same basis	570	7	563	444	78.9%	−1.1	6

* denominator under 20 — shown for completeness, not judgement. **The three agents carrying real volume are the ones that matter: Deer 61.9%, Walker 64.7%, Wright 66.7%.** Bringing your book to 80% is **33 more sits over six weeks** — at your observed close rate and ticket, approximately **\$206,000 in potential gross written business**. An estimate, not revenue we can claim would certainly have occurred.

2. Why they do not sit

We audited all 79 of your appointments that matured still reading ‘Set’, record by record, looking for any sign a confirmation process touched them — a confirmer of record, a dial from our desk, a confirmations-board message or an AI touch. **Fifteen showed any evidence at all. Three reached a Reece confirmer.** That sent us back to the full cohort.

	Lightfire book (446)	Reece book (678)	Verdict
No confirmer of record	171 — 38.3%	73 — 10.8%	p < 0.0001
Confirmed by our desk	100 — 22.4%	590 — 87.0%	our coverage gap
Self-confirmed by your agents	168 — 37.7%	6 — 0.9%	structural difference
Strand rate among those	76 of 171 — 44.4%	25 of 73 — 34.2%	p = 0.14 — not distinguishable

Once confirmation status is held constant, we find no statistically distinguishable difference between the two teams in this cohort. An appointment with no confirmer strands at 44.4% on your book and 34.2% on ours — a gap our data cannot separate from chance at this sample size. On the evidence here, **the strongest measurable driver of the difference between the two books is whether an appointment receives confirmation coverage at all.**

And that coverage predicts almost everything downstream. Appointments carrying a confirmer of record issue at 85–93% and sit at 55–73%. Appointments without one issue at 4–14% and, across both teams, **244 matured appointments with no confirmer of record produced zero sales between them.**

Where Reece needs to act

Our desk confirms 22% of your book and 87% of our own. 53 of the 79 stranded appointments sit on leads we supplied — our leads, our system, nobody on our side called them. Eight got a desk dial that never became a confirmation. Lead Perfection has **no confirmation-owner field**, so neither side can prove an appointment was queued and skipped. And our own 10.8% never-confirmed rate is not clean either.

Where Lightfire needs to act

Your **Self Generated** leads — 22 matured, 20 never confirmed, 12 stranded — never enter our confirmation process at all. Your agents who confirm their own book barely strand (Deer 7%); the agents nobody confirms strand at up to 71%. And the **21% cancellation rate** on your set appointments, against 9% on ours, is a separate qualification question this audit does not answer.

We also tested the obvious alternative — that we hand you harder leads. It does not hold: the gap appears in **every shared lead source**, and standardising for your exact source mix explains none of it (z = 8.1, p < 0.0001). We are happy to share that working.

3. Where your agents rank against ours

Ranked by gross contract dollars from each setter's appointments, both teams on the same matured basis. Our own setters are named so you can see exactly what we are comparing you against.

#	Setter	Team	Matured appts	Matured Sit %	Sold	Gross sold	Gross / appt
1	Linan, Ashley	Reece	131	55%	29	\$646,119	\$4,932
2	Zeffield, Kevin	Reece	99	70%	29	\$552,260	\$5,578
3	Avril, Chantal	Reece †	50	68%	13	\$517,644	\$10,353
4	Manieri, John	Reece (W)	83	70%	29	\$512,577	\$6,176
5	Nunes, Dylan	Reece	88	72%	23	\$485,960	\$5,522
6	Deer, Craig	Lightfire	152	40%	20	\$465,543	\$3,063
7	Jakob, Robert	Reece	44	70%	15	\$352,557	\$8,013
8	Giraldo, Miguel	Reece	43	46%	12	\$338,548	\$7,873
9	Elliott, Andre	Reece	32	78%	11	\$286,407	\$8,950
10	Toussaint, Marcorie	Reece	33	70%	9	\$239,506	\$7,258
11	Flanders, Jamal	Reece	27	78%	8	\$208,921	\$7,738
12	Demosthene, Jianna	Reece †	19	68%	6	\$176,883	\$9,310
13	Walker, Shari	Lightfire	57	39%	7	\$127,953	\$2,245
14	Evans, Tresharna	Lightfire ‡	23	35%	4	\$117,787	\$5,121
15	Wright, Carla	Lightfire	77	26%	7	\$106,712	\$1,386
16	Slowely, Diamoneke	Lightfire	56	25%	3	\$86,905	\$1,552
17	Nunes, Jonathan	Reece	10	70%	2	\$36,366	\$3,637
18	Gordon, Grecian	Lightfire ‡	9	67%	2	\$29,613	\$3,290
19	Jacobson, David	Reece	3	33%	1	\$23,876	\$7,959
20	Julien, Lynslee	Reece	6	50%	1	\$21,500	\$3,583
21	Campbell, Brittany	Lightfire	8	38%	1	\$19,561	\$2,445
22	Bryce, Shaday	Lightfire	15	40%	1	\$15,500	\$1,033
23	Dennis, Jodian	Lightfire	12	50%	1	\$6,500	\$542
24	Martin, Nickalos	Lightfire	13	38%	1	\$4,198	\$323
25	Nievez Moreira, Jardel	Reece	10	50%	0	\$0	\$0
26	Francis, Yanique	Lightfire	15	27%	0	\$0	\$0
27	Green, Sherika	Lightfire	7	29%	0	\$0	\$0

Matured Sit % is of *all* matured appointments and is necessarily lower than the **Issued Sit %** on page 1, which excludes appointments that never issued. Craig Deer, for example, is 61.9% issued and 39.5% matured — both correct, measuring different things. † vacated their seat during this review. ‡ did not appear on our account in the week of 9 August. Gross credits the full closed contract to the setter of record. Excluded: house and unassigned appointments, our AI setter, the GoHighLevel integration, and anyone below three matured appointments.

The line worth sitting with

Craig Deer ranks sixth in dollars while setting the most appointments in the company. He sets 16% more than our top setter and produces 28% fewer dollars. He is also 17.6 sits short of the 80% goal — more than any setter on either team, because he carries the most volume. **He is the single largest opportunity in this document.** Because he self-confirms most of his own book and has only a 7% strand rate, his gap appears to need a different diagnosis from the broader confirmation-coverage problem — which is exactly what we would like to work out with him directly.

4. Staffing and retention

Twelve of your agents set appointments in the week of 2 August. Four appeared on our dialler in the week of 9 August — Deer, Walker and Wright for full weeks, Slowely for one day. Evans and Gordon left the account entirely, having set 12 and 8 the week before. Output held only because the three staffed agents raised their own production 31%, which concentrates production in three people and creates clear continuity risk. Our Monday board shows it: your contribution fell from 40 appointments to 13.

Separately, several of your agents set appointments without ever logging into our dialler — consistent with working from your own system. We are not objecting, but we cannot see that activity, and it is the same population as the Self Generated leads above.

Week of 2–8 August	Gross written	Cancellations	Financing denied	Net retained	Retention %
Lightfire	\$331,042	\$95,698	\$34,826	\$200,518	60.6%
Reece	\$537,496	\$49,093	\$0	\$488,403	90.9%

The cancellation figure is **one contract** — a single \$95,698 cancellation on Craig Deer's largest write. Not a pattern, and we do not read it as one. The financing figure is not one contract: **\$34,826 across three**, against \$0 on our side that week.

5. What we are asking for

Five immediate items tied to confirmation coverage and bench stability; two further review items that should not compete with them for attention.

Immediate corrective actions

#	Request	Done means	By
1	A written confirmation ownership rule — every appointment carries one named owning desk before its date	Rule agreed and in force both sides	1 Sep
2	Reece commits coverage on Reece-supplied leads you set — 53 of the 79 stranded, ours to fix	Coverage staffed, measured weekly	1 Sep
3	Lightfire commits coverage on Self Generated leads , or they route to our desk	Named owner on every one	1 Sep
4	Issued Sit % reported weekly by agent — Deer, Walker and Wright first	Lightfire book $\geq$ 75% by 1 Oct	25 Aug
5	Restore the bench — named agents, expected days per week	$\geq$ 8 agents producing in a week	1 Sep

Secondary review items

#	Request	Done means	By
6	Agree reporting for agents dialling from your own system	Method agreed and in use	15 Sep
7	Review the three financing-denied contracts together — \$34,826 against \$0 on our side	Reviewed; retention monthly	15 Sep

Proposed next step

A working session in the week of 25 August with your account lead and ours, plus Craig Deer if he is willing. **We will bring the record-level file for all 79 stranded appointments** — lead ID, setter, dates, source, branch and every confirmation touch we found — so any appointment can be examined line by line.

Method

Cohort: appointments set 6 July – 15 August 2026 dated on or before 16 August, identical filter both teams, agents merged across both name forms. **Issued Sit %** = sits ÷ (gross issued – cancels), not also stripping NIS/NOC. **Matured Sit %** = sits ÷ all matured appointments. **Confirmed** = a confirmer of record in Lead Perfection; the stranded audit used a wider test including desk dials, board messages and AI touches. **Tests** two-proportion z, two-sided — a null result means the rates cannot be distinguished, not that they are equal. **Limits:** recent sales still pending; gross is written business; small denominators marked; retention is one week (Report 137). Underlying records available for any figure here.
